

INTRAOCULAR LENSES

FOR SEVERE MYOPIA, SEVERE HYPEROPIA, ASTIGMATISM AND PRESBYOPIA

Do you suffer from severe myopia or hyperopia? Does your presbyopia force you to wear reading glasses or progressive lenses? You may not be a good candidate for laser eye surgery, but did you know that there's another way to say goodbye to your glasses or contacts?

**With intraocular lenses,
you may even enjoy better vision
than what you achieve with
your current corrective lenses!**

SAFE AND EFFECTIVE PROCEDURE

Renowned ophthalmologist, Dr. Pop uses leading-edge microsurgery techniques, which diminishes risks associated with this type of surgery. The procedure involves making a small incision and inserting the corrective lens. In fact, it's the same technique used to remove cataracts. Therefore, you can rest assured knowing millions of people have undergone this very procedure and met with success. Most patients notice their vision is already better one day after surgery. Vision continues to improve until the eye has healed completely, which takes approximately one month.

Furthermore, Cliniques Michel Pop has several different kinds of intraocular lenses, allowing Dr. Pop to select the one that will correct your particular vision problem most effectively.
