

WAVEFRONT TECHNOLOGY

A LASER TECHNOLOGY FOR MYOPIA, HYPEROPIA AND ASTIGMATISM

Wavefront allows for pinpoint precision. It conducts a detailed analysis of the eye's irregularities, which is then transmitted to the laser device. The surgeon can, in turn, eliminate the detected defects during the procedure. This technology, combined with Lasik or PRK, brings the efficiency of laser eye treatment to a new level and reduces the risks of night vision problems, such as halos.

THREE-STEP PROCESS

1 INITIAL EVALUATION VISIT

It includes specialized vision tests and a consultation with the nurse, who will be able to answer all your questions. Furthermore, if it turns out that laser surgery is not the best option for you, other solutions offered at our clinics will be discussed with you.

2 PREOPERATIVE EXAMINATION

On the day of surgery, Dr. Pop conducts a preoperative examination of your eyes before proceeding with the appropriate treatment.

3 POSTOPERATIVE FOLLOW-UP

Includes visits within one month of your surgery where Dr. Pop examines how your eyes are healing. You may then meet Dr. Pop as often as needed at one of our clinics for a period up to 24 months post-surgery.

A PROCEDURE THAT'S FAST AND SAFE

This treatment performed by Dr. Pop lasts a few minutes. For your comfort, you will first receive a mild oral sedative and your eyes will be anesthetized using numbing drops. When the procedure is completed, you will rest for 20 to 30 minutes before returning home. You should experience blurred vision for few hours following Wavefront Lasik, or for 5 to 7 days in the case of Wavefront PRK surgery. After this time, your vision will gradually become clearer.

FLEXIBLE PAYMENT OPTIONS, FREE TOUCH-UPS

Because we have an agreement with a financial institution, you can spread the cost of your surgery over 48 to 60 months, with interest. With Accord D financing from Desjardins, the request is quick and easy. We offer a guarantee on the cost of your laser treatment and our Pop Plan for your peace of mind.

PUT YOUR EYES IN GOOD HANDS

Our procedures are carried out by Dr. Michel Pop, a well-known and innovative ophthalmologist. A certified ophthalmic assistant and licensed nurses complete our medical team. Our clinics are equipped with the latest technologies and most advanced surgical techniques that fully comply with North American sterilization standards.

Cliniques Michel Pop is proud to display the Specialized Medical Centre permit issued by the Ministère de la Santé et des Services sociaux du Québec.
